

SELECTED OPPORTUNITIES IN IMMUNO CARDIOLOGY

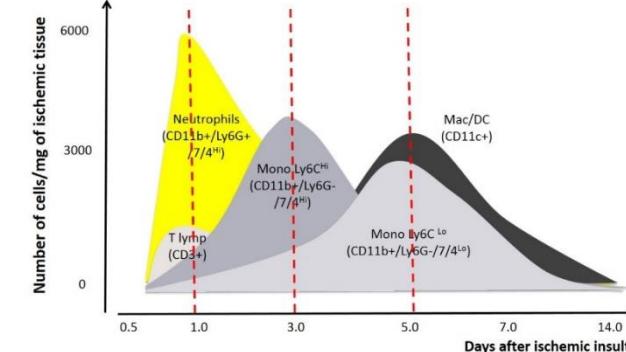

AN AGENT CAPABLE OF DEPLETING CD8 T CELLS FOR THE
TREATMENT OF MYOCARDIAL INFARCTION OR ACUTE
MYOCARDIAL INFARCTION (BIO 15275)

BIO15275 - AN AGENT CAPABLE OF DEPLETING CD8 T CELLS FOR THE TREATMENT OF MYOCARDIAL INFARCTION OR ACUTE MYOCARDIAL INFARCTION

Product factsheet

In vivo PoC

- ▶ **Target:**
 - ◆ CD8
- ▶ **Product:**
 - ◆ CD8+ T cell depleting agent
- ▶ **Application:**
 - ◆ Myocardial infarction
- ▶ **Technology:**
 - ◆ Antibody
- ▶ **Rational / POC:**
 - ◆ Immune cells are recruited in myocardial tissue after ischemia reperfusion with beneficial or deleterious impact
 - ◆ The role of CD8⁺ T cells was not known
 - ◆ The team showed that depletion of CD8⁺ T cells reduces necrosis, remodeling and improves myocardial function in a mouse model of permanent coronary ligation
 - ◆ In human, CD8+T cells quickly infiltrates cardiac ischemic tissue
 - ◆ Animal Poc (Pig) in progress
- ▶ **Patent and publication:**
 - ◆ WO2017064034: An agent capable of depleting cd8 t cells for the treatment of myocardial infarction or acute myocardial infarction

Silvestre et al, Physiol Rev, 2013

BIO15275 - AN AGENT CAPABLE OF DEPLETING CD8 T CELLS FOR THE TREATMENT OF MYOCARDIAL INFARCTION OR ACUTE MYOCARDIAL INFARCTION

Proof of concept

CD8⁺T cells depletion reduces infarct size and fibrosis in peri-infarct area after permanent coronary ligation in mice

100 µg CD8 mAB

αCD8

BIO15275 - AN AGENT CAPABLE OF DEPLETING CD8 T CELLS FOR THE TREATMENT OF MYOCARDIAL INFARCTION OR ACUTE MYOCARDIAL INFARCTION

Proof of concept

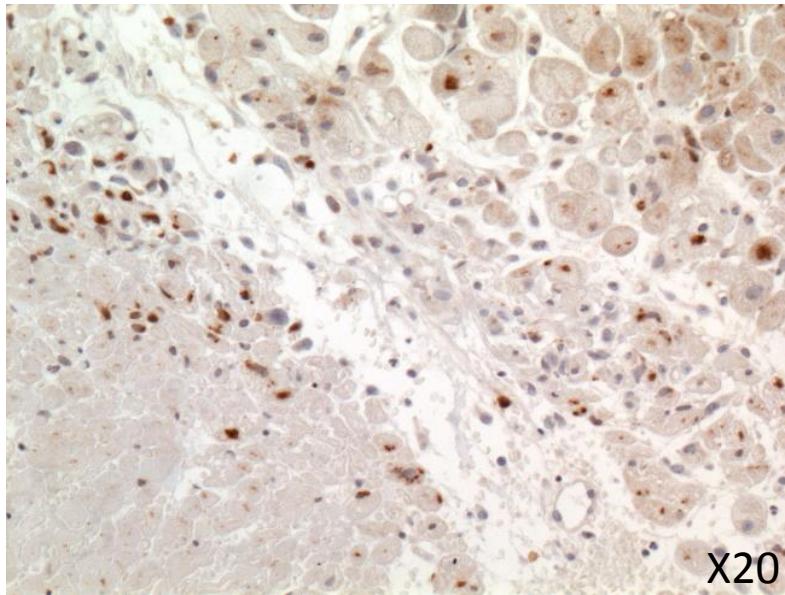

CD8⁺T cells depletion improves left ventricular function (echocardiography) after permanent coronary ligation in mice

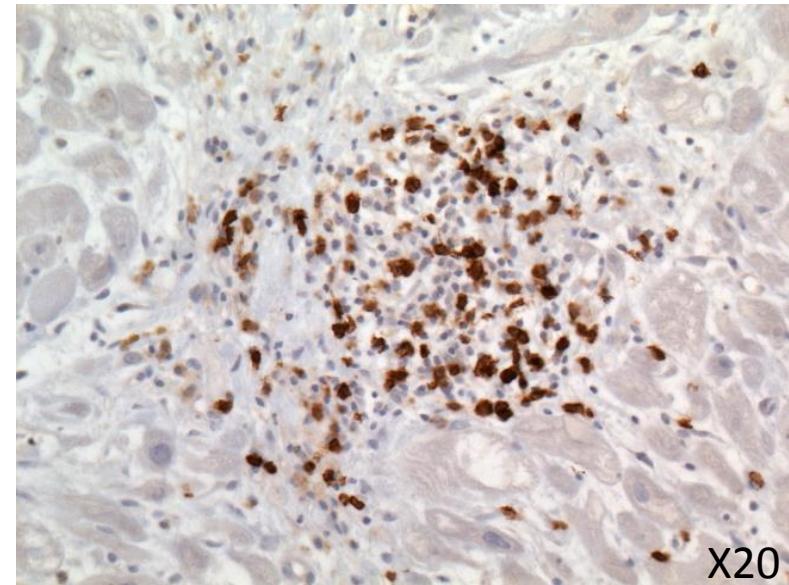

Proof of concept

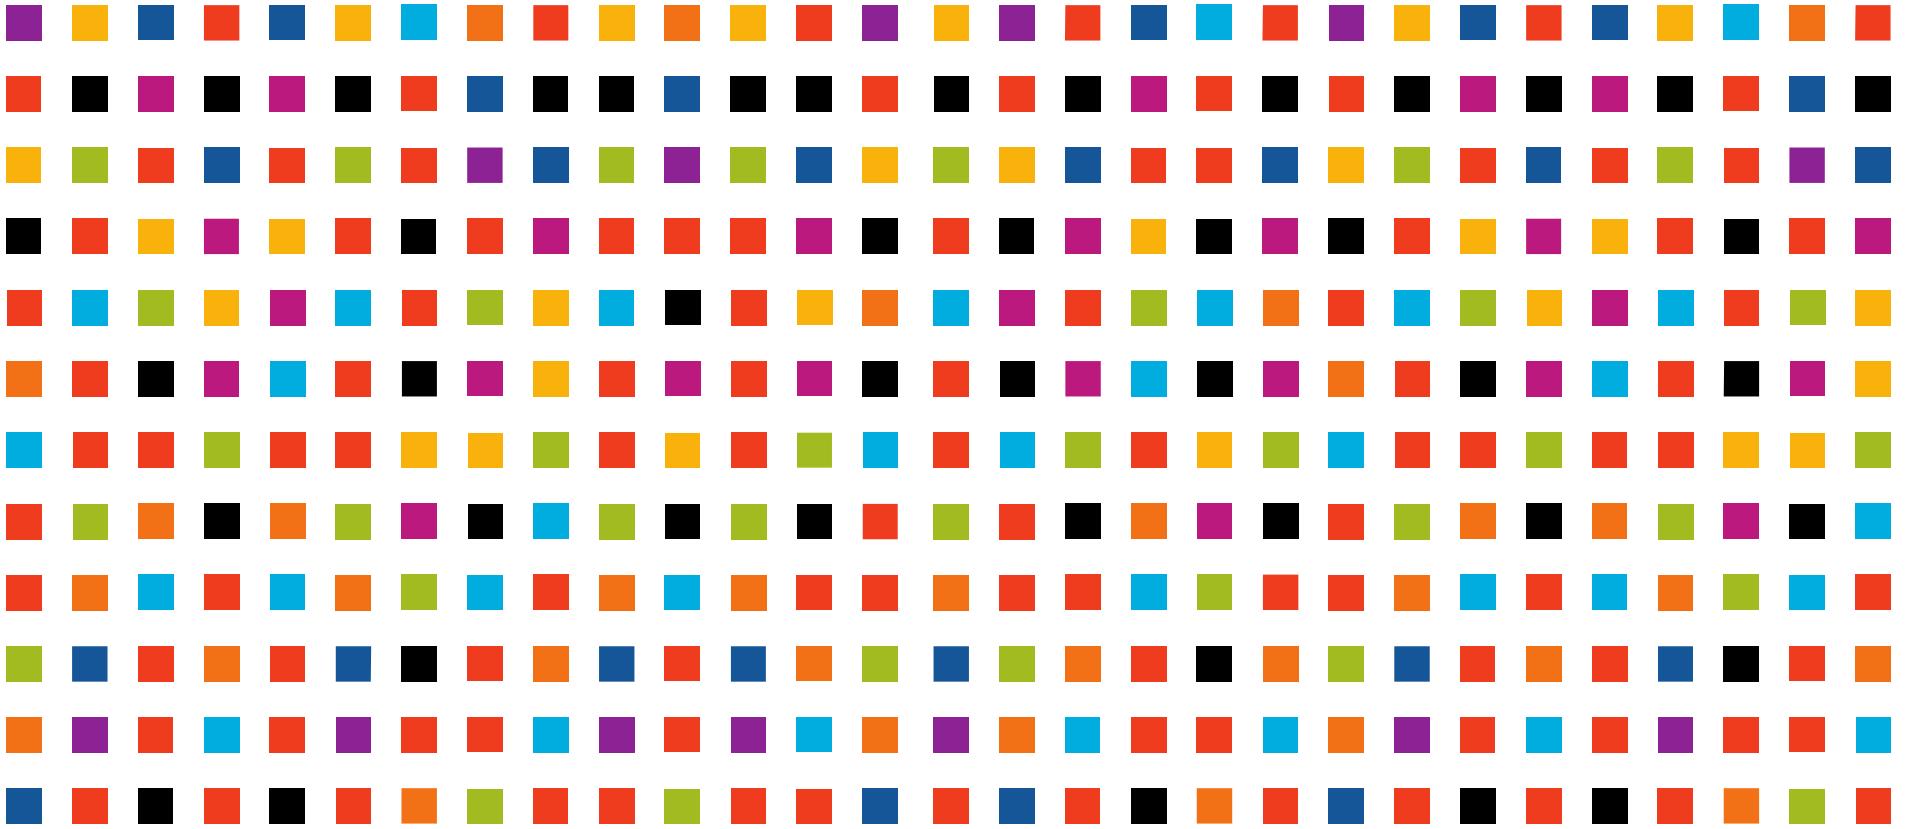

CD8⁺T cells infiltration in human cardiac ischemic tissue

A: 1 day after MI

B: 7 days after MI
