

Cellular Fibronectin

- Highly expressed during embryonic development and *low or undetectable* in most adult tissues

Plasma Fibronectin

Cellular "Oncofetal" Fibronectin

- *De novo* expression in a spatially and temporally restricted manner under certain physiological conditions and in cancer

- tumor-associated vessels
- tumor-associated fibroblasts
- immune / inflammatory cells
- tumor cells

Hypoxia
Angiogenic factors
Stress (mechanical, oxidative)
TGF- β
Wnt signaling
